

Flexible Automated Billing

THE BILLING MODULE is designed for flexibility. It provides integration with third party interfaces such as payment gateways, credit card processors, EFT, and banks.

The billing module integrates with policy management, allowing direct processing of new business, renewals, and amendments. Flexibility in configuring payment plans allows the system to be implemented quickly, improving speed to market for new and existing product lines. This module also manages notices relating to non-pay cancellations, underpayments, and other billing related activities.

FEATURES INCLUDE:

- Fully automated system with override provision
- Support for a variety of billing, including scheduled and equity
