

Cincom Eloquence[®]

PROPERTY & CASUALTY INSURANCE SOLUTIONS

Cincom Eloquence is the most intuitive customer communications solution in the industry, providing your business with the power to generate dynamic documents—both structured and free-form—that are more accurate, timely and persuasive.

Easy to Use!

Cincom Eloquence's intuitive interface (co-designed with Human Factors International) enables users to easily design document templates containing conditional logic, guided workflows and integrated real-time data. Templates can be imported from other sources or created and tested directly within a familiar Microsoft[®] Word-embedded environment before being stored in a central repository. Generation of communications can be deferred to larger runs or produced individually in real time and delivered via print (PostScript, PDF, AFP, PCL, HTML and Word) or electronic channels (email, fax, Web and mobile).

Easy to Integrate!

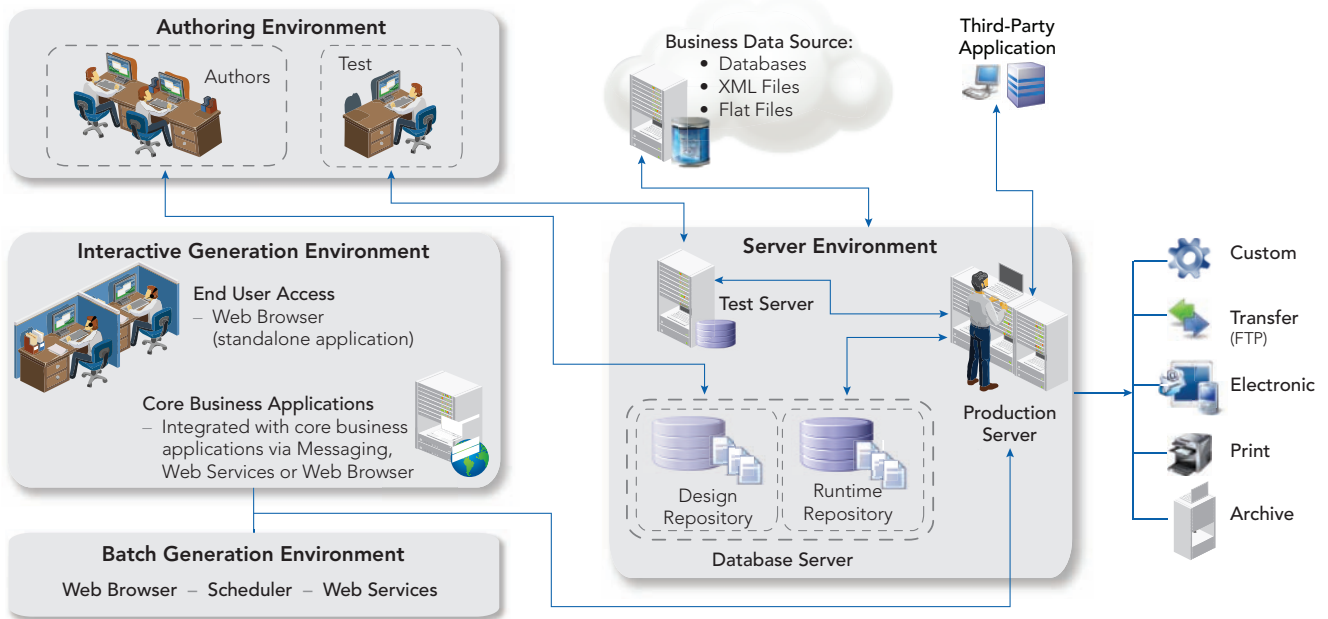

IT professionals will value Cincom Eloquence's single platform for high-volume batch production and real-time interactive generation. Leveraging ubiquitous technologies like XML, J2EE, JBoss, Tomcat and IBM's WebSphere, Cincom Eloquence optimizes legacy investments by effortlessly integrating with core business applications, databases and information technology infrastructures—from mainframe to emerging services-oriented architectures (SOAs).

Accelerate
Time-To-Market
by

90%
