EXPERIENCE

More than thirty years exclusively dedicated to the insurance industry make it difficult to find someone who knows more about insurance and pension funds' technology than i2S. i2S specialises in all insurance areas, with an extensive experience in migration and implementation, with a success rate of 100%. We never give up on our clients and we are known by the long-term relationships we build, in such a way that none of our clients has left i2S. Some of them work with us since the very first day.

AGILITY

The i2S solutions allow reducing the time-to-market to four to six weeks, streamlining the launch of new products and allowing an agile response to the market challenges, with a rapid ROI. Besides, all our solutions ensure complete autonomy in the definition and management of business processes, being fully configurable to fit the company needs and flexible enough to complement pre-existing internal solutions.

INNOVATION

At i2S we continuously invest in innovation and technological upgrading. We advocate the use of open standards and we conduct research every day to improve our solutions. That is why analysts from Celent, which are among the most respected in the insurance industry, consider one of those solutions i2S Life one of the most advanced in the EMEA region.

SOLUTIONS

i2S provides the insurance industry with a suite of solutions addressing specific areas that can be integrated together or with external solutions. i2S solutions are modular, following open standards and possessing extensibility points that allow adaptation to pre-existing systems' architectures. This ensures effective business management while protecting the investment. i2S also provides support, implementation and hosting services, equipped with a team of professionals certified in ITIL (Information Technology Infrastructure Library), PMP® (Project Management Professional) and ITSQB® (International Software Testing Qualifications Board).

i2S SUITE

CORE

i2s® life

Modern and versatile technological solution that addresses all functional areas and all product types of a Life insurance company.

i2s® non-life

Solution for the management of Non-life insurance companies, that addresses all functional areas and all product types.

DIGITAL TRANSFORMATION

i2s® configurator

Platform that combines two unique technological pieces developed by i2S: the IBML language (Insurance Business Modelling Language) and the rules engine, which allows defining all attributes and representing calculation rules for insurance products.

i2s® channels

E-insurance and omnichannel architecture that allows implementing front-office solutions for the different sales channels. It can be easily integrated with other systems, internal and external to the company.

i2s® analytics

Tool that allows, by means of data analysis, viewing all the information relevant for business management, using specific dashboards.
