i2S Life

Functional overview

Support to all business processes across functional areas

i2S Life highlights

- Unified view of the entity.
- Aggregate risk management.
- Total integration of business concepts:
 - quotation and policy;
 - policy and reinsurance;
 - policy and claims.
- Configurability:
 - Claims rules and processes.
 - Business concepts and rules.
- Mathematical reserves updated daily.
- Automation:
 - underwriting based in actuary defined rules;
 - funds management: units purchase and sale;
 - portfolio transfers between agents.
- Complete log and audit to policy changes.

i2S Configurador

Workbench that allows defining the structure and behaviour of an insurance product.

Powered by a rules engine based on IBML (Insurance Business Modelling Language).

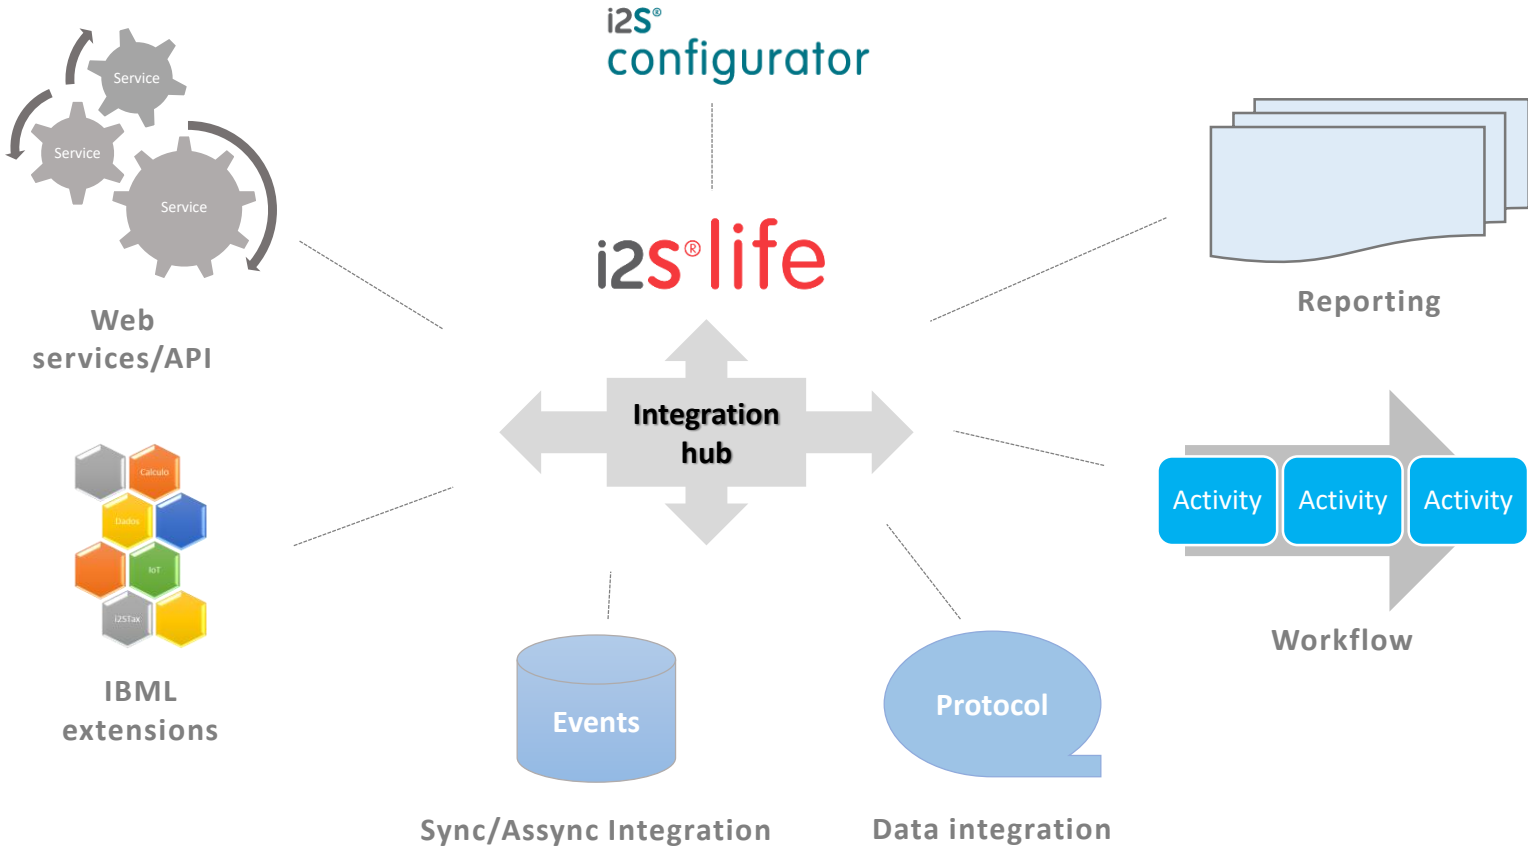

IBML allows the definition of all business and actuarial rules, insurance product testing and simulation capabilities.
