About TIA Technology

Activating the insurance digital ecosystem

With its open architecture and advanced integration possibilities, the TIA core insurance platform supports the insurer's digital ecosystem – well into the future.

Strategic digital insurance solutions for today and tomorrow

TIA Technology provides an open, scalable, standard software platform to property and casualty insurers around the world. With over 20 years of software and services experience and 54 customers serving over 100,000 users globally, TIA has deep insight into insurance business processes. We deploy this expertise to help insurers develop differentiating products that engage their customers and support their business strategies and digital transformations.

Global Services & Solutions team

Besides a strategic core insurance platform, we offer the full scope of expert implementation, application management and hosting services. No matter where our customers are on the digital spectrum, our Services & Solutions team works to ensure they keep control of costs, achieve a faster time to market and realise the ultimate business value of their TIA solution. The Services & Solutions team has boots on the ground in Scandinavia, the Baltics, Germany and South Africa.

Supporting the insurance value chain

For most insurers to deliver on their business strategy, they need to be able to serve customers through each part of the insurance value chain. With its open and flexible architecture, TIA supports every part of this value chain, and enables free integration to third-party technologies, such as customer engagement portals or data and insights systems. With the TIA platform, insurers can optimize their digital ecosystem and evolve it as their business needs change over.

Our product portfolio

The TIA core foundation delivers the essentials for running any insurance business process and fits into any enterprise application landscape. Its REST API opens vast integration possibilities with some of the most exciting engagement technologies from InsurTech, best-of-breed business processing programs, such as TIA's own integrations, which include Products, Policies, Claims, Sales, Coinsurance and Reinsurance.

Our extensive partner community

To ensure dedicated and specialized service that includes knowledge of local rules, regulations and business practices, we have built up an extensive global partner community. We've carefully selected and established close relationships with our partners to ensure we can accommodate all our customers' local-market needs. Each year, we host the TIA Community Conference, where we bring the community together to learn, share and be inspired by the latest knowledge, ideas and trends in the industry.

Our strong owner and supporter

TIA Technology is owned by EQT, one of the most established and best performing private equity firms in Europe. Since mid 2014, EQT has contributed significant financial services and operational experience, strengthening TIA and preparing us for a demanding, fast-paced future.
