Core Insurance-as-a-Service

Digital End2End Platform for P&C

Who is tech11?

tech11 is a provider of a digital P&C core insurance platform for the insurance industry in EMEA. The platform has been designed for fully automated End2End insurance business.

The modular solution is driven by a light-weight container-based microservices architecture. Perfect to integrate and easy to scale. It runs on-premises or fully cloud-based. Customizing follows a “zero code” approach driven by Camunda’s BPM engine and allows business users to purely configure products and processes by using business content out-of-the-box.

Manage policy processes (sales & post-sales operations) and claims processes (FNOL, claims transactions & payments) End2End and use the additional out-of-the-box functionalities, like i.e. document design & creation or true omnichannel REST API capabilities.
