

Offering elite MD Opinions when they are needed most

MD Opinions is a health benefit that provides its members with access to the best medical minds in the world for second opinions.

Members have access to our global network of expert physicians who specialize in a wide variety of therapeutic areas and disease states. As a result, employees are empowered to make better informed decisions regarding their health care and treatment plans, while your company decreases its medical costs.

DATA-DRIVEN ENGAGEMENT

20% of the population contributes to 80% of the costs

- MD Opinions with Personal Messaging now offers a comprehensive population health and benefits solution.
- Prevention is the best medicine. The best outcomes are realized when conditions are caught as early as possible and treated appropriately.

Implication: Engage member as early as possible to get them to key interventions as quickly as possible.

Case Study: Intervention resulted in early-stage liver cancer treatment vs late-stage treatment, saving 347% and also our patient's life.

Clinical expert opinions are available for a wide variety of conditions and disease states requiring specialty care, including:

- Orthopedics
- Hematology
- Reproductive
- Digestive
- Respiratory

We're uniquely positioned to provide second opinions in oncology, through our partnership with Cancer Expert Now

Cancer is complicated and costly and typically results in the highest cost claimants. With over 200 types, there are experts in each type of cancer. By 2030, cancer will surpass heart disease as the No. 1 cause of death in the United States.

PERSONAL MESSAGING AND MOBILE APP

- Confidential, customized messaging emphasizing prevention strategies reaches all your employees
- Timely, condition-specific messages emphasize the importance of doctor visits, evidence-based tests, screenings, and medications
- Ongoing preventive and condition-specific reminder messages are sent throughout the year
- Information to promote healthy lifestyle changes. Healthcare analytics stratify employees by age, gender, and chronic disease
- Analytics use medical, pharmacy claims, lab data, and utilization information

Outcome: Increase compliance and persistency with treatment regimens and survival protocols
