

INTEGRATION SOLUTIONS

- Trade Repositories
- Central Clearing
- Swap Execution Facilities

MESSAGING SOLUTIONS

- Trade Data Validation
- Transparency and Compliance

“Risk Focus delivered a fully functional enrichment engine to support ESMA Trade Reporting in record time. They offered product expertise, solution accelerating tools and a clear technical vision on how to get the job done.”

Global regulation of derivatives trading, clearing and reporting is a significant driver of technical change for our Capital Markets clients. High complexity coupled with tightening budgets preclude wholesale investment in new platforms. Clients must get the most from incumbent systems while delivering scalable solutions to meet the demands of the regulators.

Risk Focus fully understands this challenge. We have the experience, tools and approach to deliver open, message-based components that enable legacy technology stacks, bridge product silos and support the functional demands of derivatives trade reporting.

THE RISK FOCUS WAY

Flexibility, transparency and supportability are key to the success of our solution engagements. We rely on proven enterprise integration patterns implemented on lightweight, message-driven architectures. We combine our rich domain knowledge, including market leading FpML processing and modeling expertise and direct integration experience with global market platforms (e.g. DTCC, MarkitWire, CME) to deliver a range of client enabling solutions.

Risk Focus solutions include FpML message validation, DTCC data integrity monitoring, real-time, multi-jurisdiction reporting, compliance gateways and client-specific combinations. We build scalable, supportable solutions with a focus on limiting the technology footprint and total cost of ownership.

We are the Derivatives Trade Reporting and Integration partner of choice ...Because We Deliver.
